

Biomass Boiler Workshop

October 30 and 31, 2024

Gulfport, Mississippi

The Biomass Boiler Workshop is a unique event for representatives from the Pulp and Paper, Forest Products, Food Industries, Power Sector, Independent Power Producers, and Energy-from-Waste Industries to learn and network. In October, we bring our Workshop to the sun-kissed beaches of the Mississippi Gulf Coast.

This two-day event comprises presentations on the latest technology that has improved performance, fuel firing capacity, and operational flexibility of biomass and other solid fuel fired boilers.

Participants will:

- Learn about the latest retrofit technology for biomass and other solid fuel fired boilers and associated equipment.
- Explore how other plant operations solve their boiler area problems.
- Receive information for solutions to meet specific goals.

Jansen has upgraded over 125 biomass and other solid fuel fired boilers. These upgrades have:

- Increased fuel firing capacity.
- Reduced fossil fuel consumption and lowered carbon footprint.
- Improved emissions performance (CO, NO_x, VOC, particulate matter).
- Reduced char carryover and minimized unburned losses.
- Lowered erosion by limiting ash carryover.
- Enhanced heat capture resulting in higher power generation, lowered stack gas exit temperatures, and increased thermal efficiency.

Workshop Sponsors

Attendance to the Workshop is FREE OF CHARGE but space is limited. Our Workshops fill up quickly! AN EARLY SIGNUP IS REQUIRED TO GUARANTEE YOUR SPOT

To sign up and receive a detailed agenda, Workshop location, hotel information, etc., please contact **Cathy Thomas**
